

Electronic Circuits and Systems (ECS)

Students taking the ECS portion of the MS Written Comprehensive Exam will be tested on two graduate-level exam problems, each of which will be based on material taught in ECE166/265a and in ECE164/264a (one problem per course sequence). A student is required to answer only one problem.

The related study materials are available on the respective course websites (book chapters or class notes; sample final exams), and the problems will be similar to final exam problems given in these courses.
